

Opening a world of
new opportunities...

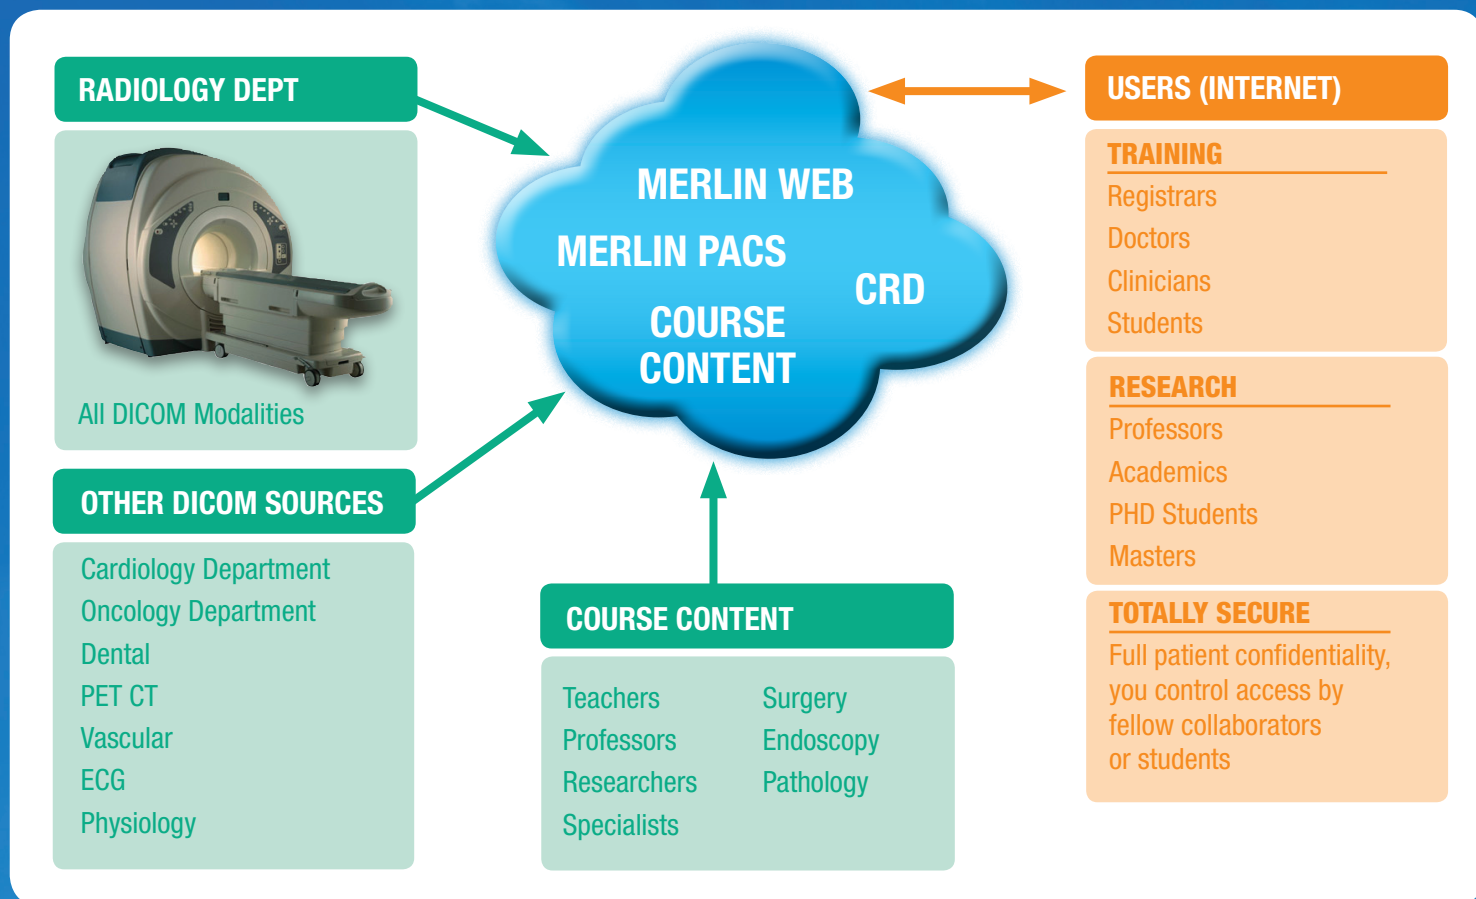

Collaborative Research Dossier

New cloud computing technology
has made possible the Collaborative
Research Dossier (CRD) from CDN.

Think of CRD as a 'Virtual RIS PACS' in the Cloud where you can upload DICOM Radiology studies from any vendor PACS, to the secure hosted Data Centre facility operated by CDN. This provides you with a number of capabilities that were not possible before.

Diagnostic collaboration

Collaboration is now possible between yourself and your colleagues regardless of which vendor PACS you use, as the CRD facility permits a vendor agnostic interchange of information. Images can be viewed with full DICOM resolution via the Merlin viewer permitting detailed diagnosis and shared medical opinions.

Overflow or after hours reporting

Multiple practices or imaging locations are able to send Radiology studies to the PACS in the CRD. These are collated onto a work list that can also be accessed from anywhere. Radiology reports can be dictated and either sent electronically to the originating source, or to a typing facility for further editing.

Teaching files

Delivering teaching files and access to students is now possible without the need for them to access your PACS on your secure hospital network. Teaching curriculum can be created with other multimedia content comprising movies, pictures and documents. The integrated course content module holds a database of student records with examinations and their learning results.

Research collaboration

Individual and collaborative research is also possible. You can build your own research dossier, or by allowing your colleagues to access your training folder, they can add interesting content that supports your research. The encapsulated viewer provides a comprehensive set of diagnostics tools allowing you to manipulate and even cine through multi-slice image sets.

Presentations at conferences

These can be facilitated by preparing your teaching material in advance at your institution. You are able to build units and lessons containing real Radiological studies, not just pictures, plus movies and documents. You can present these while online to the CRD via the internet to your audience. All of this is accessible quickly from anywhere in the world via the web as CRD is a hosted service.

Discuss your specific requirement with the team at CDN today. Contact us by emailing sales@cdn.com.au or calling (02) 4226 4406 or review the CDN website at www.cdn-pacs.com
